

Day 08 - Reflection & Planning the Next Phase

Objective

To review the concepts learned during the first week of my Cloud & DevOps journey, organize study materials, and prepare a structured roadmap for the upcoming learning phase.

Why Reflection Matters

Continuous learning is not only about consuming new information. Taking time to review previous concepts helps reinforce understanding, identify knowledge gaps, and improve long-term retention.

Today's focus was on strengthening the foundation before moving on to more advanced Linux and Cloud topics.

Progress Review

During the first eight days, I covered the following topics:

Git & GitHub

- Git Fundamentals
 - Git Workflow
 - Repository Management
 - Branching
 - Merging
 - Version Control
 - GitHub Collaboration
-

Internet & Application Fundamentals

- How the Internet Works
 - Client-Server Architecture
 - Web Servers
 - Application Servers
 - Types of Applications
 - Application Support
 - Application Maintenance
-

Linux Fundamentals

- Linux Basics
 - Linux Distributions
 - WSL Installation
 - Linux Terminal
 - File System
 - Linux Architecture
 - Package Management
 - Process Management
 - Advanced Linux Commands
-

Activities Completed Today

Instead of learning a new technical topic, I focused on:

- Organizing daily notes
- Reviewing Linux concepts
- Reviewing Git commands

- Updating my GitHub repository
 - Exporting notes to PDF
 - Planning upcoming learning goals
 - Preparing study resources for Week 2
-

Self Assessment

Concepts I Feel Confident About

- Git Basics
 - GitHub Workflow
 - Linux Terminal Navigation
 - Linux File System
 - Linux Architecture
 - Basic Linux Administration
-

Areas to Practice More

- Linux User & Group Management
 - Shell Scripting
 - Networking Concepts
 - SSH & Remote Server Management
 - Linux Permissions in Depth
-

Roadmap for the Next Phase

The upcoming topics in my learning journey include:

1. Linux User & Group Management
2. File Permissions (Advanced)

3. Shell Scripting
 4. Linux Networking
 5. Process & Service Management
 6. AWS Cloud Fundamentals
 7. Docker
 8. Kubernetes
 9. CI/CD
 10. Infrastructure as Code
-

Lessons Learned

- Consistency is more valuable than speed.
 - Strong fundamentals make advanced topics easier to understand.
 - Documentation improves retention.
 - Practical exercises are just as important as theory.
 - Reflection helps identify weak areas before moving forward.
-

Key Takeaway

Cloud Computing and DevOps require a solid understanding of Linux and system administration. Taking time to revise, organize, and plan ensures that future learning builds on a strong foundation rather than rushing through topics.

Interview Reflection

If I were asked today, I would be comfortable explaining:

- What Git is
- Git Workflow

- Client-Server Architecture
- Linux Architecture
- Linux File System
- Common Linux Commands
- Difference between Linux and Unix

Topics I want to become more confident in:

- Shell Scripting
 - Networking
 - User Management
 - Process Management
 - AWS Services
-

Day 08 Summary

Today was dedicated to reviewing my learning journey so far, organizing notes, updating documentation, and planning the next phase of study. Rather than introducing new concepts, I focused on strengthening my existing knowledge and preparing for more advanced Linux and Cloud Computing topics.

Status:  Day 08 Completed (Reflection & Planning Day)
